Corporate Resources Department

THE CITY OF CALGARY

91-06413/

NOTE TO USERS:

The ***Total Income*** *variable has been revised and replaced with a variable called* ***Income*** *for 1988.* ***Income*** *is defined as the sum of receipts (gross flows) received by individuals during the calendar year as compensation for present or past employment plus all government transfer payments and yields from investments. Excluded are capital gains.*

Two new components added to the revised income variable for 1988 are the Child Tax Credit and the Federal Sales Tax Credit. A complete list of the income components can be found under the section on "CONCEPTS" (Page 1). Users are advised to exercise caution if comparisons are made with the data reported for 1987 and earlier years.

INDEX OF MEDIAN INCOMES BY COMMUNITY DISTRICT AND WARD 1976 - 1988 Project No. 6040/03

Prepared by: D.C. Neave
E. Fung

INDEX OF MEDIAN INCOMES BY WARD 15

REFERENCE MAP: Community Districts - 1987 16

INTRODUCTION

This report provides an updated historical index of income tax data by community district for Calgary. It is based upon information provided by the Small Area and Administrative Data Division - Statistics Canada. The purpose is to assist program planners, consultants and others who require basic income information in order to construct demographic or socio-economic "profiles" of selected areas within the city.

The data are subject to various limitations and should be used as a general rule of thumb rather than as a precise indicator of the degree of "affluence" of particular community districts.

In addition to containing income data for 1988, the report also incorporates community district boundary changes which have occurred since 1982 and revised ward boundaries in 1989. However, it does not include income data for those areas annexed to the City effective July 01, 1989.

CONCEPTS

The index is based upon information obtained from individual income tax returns which have been aggregated to the level of community districts. It therefore represents income reported by individual taxfilers and not household or family income.

The measure of income which has been used is that of total income as reported to Revenue Canada by taxfilers. The total income variable has been revised and replaced with a variable called income for 1988. The revised variable income includes income from the following sources:

- employment
- pension
- self-employment
- family allowance
- unemployment insurance
- interest and other investment
- rental
- other (e.g. alimony)
- child tax credit
- federal sales tax credit
- RRSP
- limited partnership

Non-taxable income, such as social assistance payments and Guaranteed Income Supplements, is not included in income.

The components of total income (for 1987 and earlier years) are essentially the same as those found under the income category defined above. It should be noted, however, that income reported from "Capital Gains" is included, while income reported from the "Child Tax Credit" and the "Federal Sales Tax Credit" is excluded. RRSP income and limited partnership income were already included in total income because they did not appear separately on the income tax return prior to 1988.

The median total income of taxfilers has been used because:

> With the tax system, in particular, some individuals can have extremely high or extremely negative incomes. As a result, a single taxfiler, even in a very large Canadian city, can have an impact of $1,000 or more when average income is computed. Because of the effect of these income extremes on variables such as average income or average employment income, it is strongly recommended that median income values be used. A median falls in the middle of a distribution with an equal number of cases above and below it.*

The index has been created by setting the city-wide median income at 100.0 for each year. Median incomes for each community district have then been expressed as a percentage of the city-wide median income. For example, if a community district median income is $18,100 and the city-wide median income is $19,700 then:

$$\text{Community District Index Value} = \frac{\$18,100}{\$19,700} \times 100 = 91.9$$

In order to ensure the confidentiality of individual income tax returns, no data have been produced for areas (community districts) within the city which had fewer than 100 taxfilers.

METHOD OF OBTAINING DATA AND LIMITATIONS

As noted, data in this report are based upon individual income tax returns. Most tax returns are filed in the spring of the year following the reference year, and the mailing address at the time of filing is the basis for the geographic information. These have been aggregated to a community district level by:

1) identifying the groupings of postal codes associated with mailing addresses in each district; and

2) assigning each tax return to that community district which has a corresponding postal code.

* Small Area and Administrative Data Division - Statistics Canada. Overview of and Guide to the Use of Administrative Social Data (draft) Ottawa, 1983, p.11.

This method assumes that:

1) the listing of postal codes by district is comprehensive; and

2) the mailing address (postal code) on individual tax returns and the residential address of the taxfilers are identical.

Because of this reliance on allocation of records by mailing address, the method is less exact than that of obtaining information by means of household surveys.

It should also be kept in mind that the income levels reported are based on an aggregate of individual tax returns. They do not represent household or family income data which are collected on federal censuses or by means of special surveys.

The above limitations notwithstanding, the method used does provide a cost-effective means by which to obtain information regarding the relative income levels of taxfilers in various areas of Calgary.

In addition to the historical index of median incomes by community district, the report contains figures showing the distribution of communities which were 15 percent higher or lower than the city-wide median. A reference map of community districts has also been included.

DISTRIBUTION OF COMMUNITIES WITH MEDIAN INCOME 15% GREATER THAN ALL CALGARY

In 1988, there were 45 community districts with a median income which was 15% or more higher than that for all Calgary - i.e. an index score of 115.0 or greater. The distribution of these communities is shown in Figure 1. Five groupings of "higher income" districts are identifiable.

Area 1 - North/Northwest:

This grouping of community districts consisted of Edgemont, Hawkwood, MacEwan Glen, Ranchlands, Sandstone Valley, Scenic Acres and Silver Springs. Median income index scores ranged from 119.3 (Ranchlands) to 162.9 (Scenic Acres).

Area 2 - Inner Southwest:

This grouping was made up of the following communities: Britannia, Elbow Park, Parkhill/Stanley Park, Rideau Park, Roxboro, Scarboro, Scarboro/Sunalta West and Upper Mount Royal. Median income index values ranged from 121.3 (Parkhill/Stanley Park) to 177.2 (Roxboro).

Area 3 - South:

There were eleven communities in this group. They were: Canyon Meadows, Deer Run, Douglasdale Estates, Lake Bonavista, McKenzie, Midnapore, Millrise, Parkland, Shawnee Slopes, Shawnessy and Sundance. Median income index values ranged from 115.2 (Canyon Meadows) to 167.0 (Douglasdale Estates).

Area 4 - Outer Southwest:

Eleven community districts located near or adjacent to the southwest perimeter of the city were characterized by relatively high median incomes. These were: Bayview, Bel-Aire, Chinook Park, Eagle Ridge, Kelvin Grove, Lakeview, Mayfair, Oakridge, Palliser, Woodbine and Woodlands. Median income index values in this group ranged from 116.2 (Lakeview) to 170.1 (Bel-Aire).

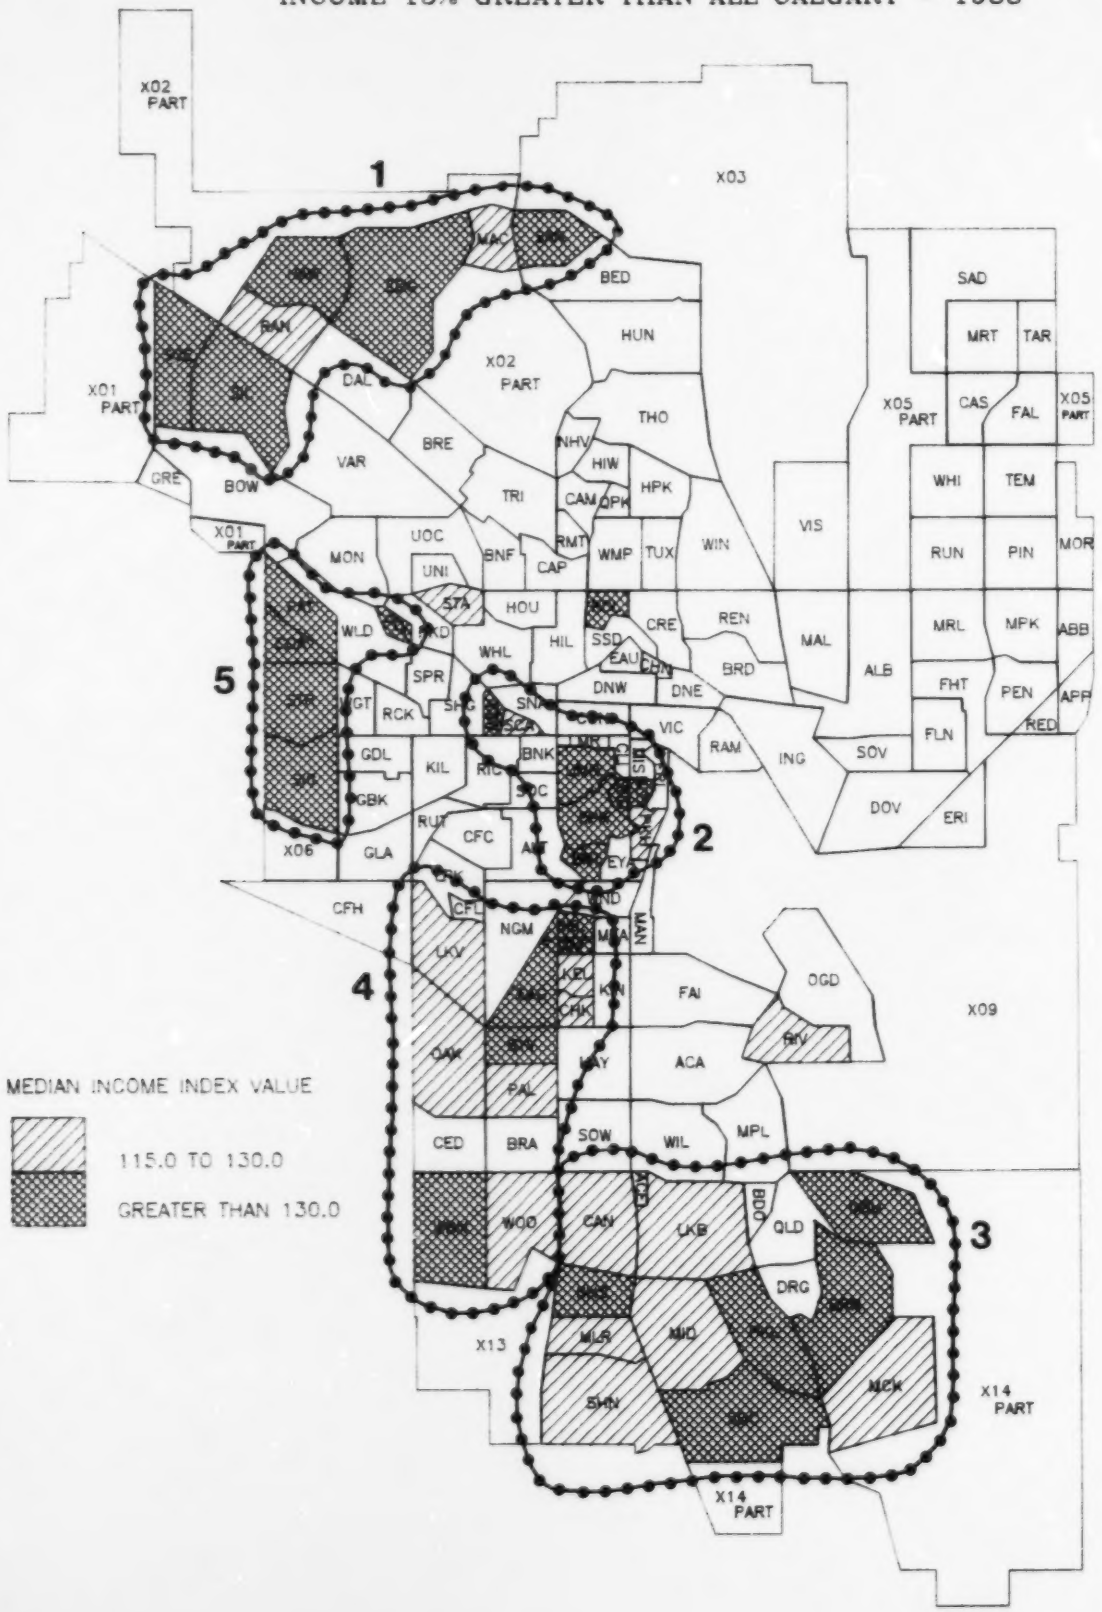
Area 5 - West:

The communities of Coach Hill (152.3), Patterson (143.7), Point McKay (167.5), Signal Hill (169.0) and Strathcona Park (168.0) were well above the Calgary median income.

Other:

While not part of a larger grouping, Riverbend (123.4), Rosedale (134.0) and St. Andrews Heights (117.3) exceeded the city-wide median.

FIGURE 1: DISTRIBUTION OF COMMUNITIES WITH MEDIAN INCOME 15% GREATER THAN ALL CALGARY – 1988



DISTRIBUTION OF COMMUNITIES WITH MEDIAN INCOME 15% LESS THAN ALL CALGARY

There were 25 community districts in 1988 which had a median income 15% or more below that for all Calgary - i.e. an index score of 85.0 or less. Figure 2 indicates the distribution of these "lower income" districts.

Area 1 - Northwest:

This group of districts was made up of Bowness (79.2), Montgomery (78.2) and the University of Calgary (57.9). The low median income index score indicated for the latter is presumably due to the high concentration of student accommodation in this district.

Area 2 - North:

The communities of Highland Park and Bridgeland/Riverside had median income index values of 80.7 and 79.2 respectively.

Area 3 - East:

The eastern portion of Calgary contained eight community districts with a median income more than 15% below that for the city as a whole. They were: Albert Park/Radisson Heights, Applewood Park, Dover, Forest Heights, Forest Lawn, Penbrooke Meadows, Red Carpet/Mountview Mobile Park and Southview. Forest Lawn (67.0) and Dover (78.7) had the lowest and highest median income index scores within this area.

Area 4 - Downtown/Inner City:

This part of the city had seven lower income community districts in 1988. The grouping consisted of: Chinatown, Downtown East, Downtown West, Inglewood, Lower Mount Royal, Ramsay and Victoria Park. Chinatown with a median income index value of 43.7 was at the lower end of the range while Lower Mount Royal at 84.8 was the highest.

Area 5 - West:

The last major grouping of districts was made up of: Bankview, Lincoln Park Redevelopment, Rosscarrock, Spruce Cliff and Sunalta. Median income index scores ranged from 50.8 (Lincoln Park Redevelopment) to 84.3 (Sunalta).
